Advanced Universal File Viewing

View 'Hidden' Information in Files

Use in Conjunction with 3rd-Party Applications

Quick View Plus Professional Edition is must-have software for law firms, business enterprises along with government agencies that need advanced universal file viewing and search capabilities and lower software licensing costs.

For law firms, Quick View Plus Professional Edition is an indispensible tool in litigation case management, litigation support, eDiscovery and computer forensics. Recommended and used by leading legal software and service providers, Quick View Plus Professional Edition makes it easy to search and review virtually any type of content as it was originally created, and is simple to integrate with existing applications.

For businesses and government agencies, Quick View Plus Professional Edition slashes software licensing costs and boosts productivity. By providing access to information created in virtually any format—even Microsoft Project files—Quick View Plus Professional Edition enables employees to access information from e-mail attachments, the web, networks and more.

Deploy it on desktops or use in conjunction with third-party applications. Either way, no other software makes viewing information in so many different formats this easy and inexpensive.

Reduce your software licensing expense

Quick View Plus Professional Edition reduces costs by eliminating the need to purchase native applications for file viewing. Instead of buying numerous programs simply to view files, Quick View Plus Professional Edition lets you view all of the information at a fraction of the cost.

View content in over 300 formats

Quick View Plus Professional Edition is the industry's most advanced file viewing software. It's also the easiest to use. With Quick View Plus Professional Edition, you can instantly access information in more than 300 different formats, including Windows, Macintosh, Internet, and DOS, from any source—e-mail attachments, the web, networks, and more. Quick View Plus Professional Edition delivers all of this in one easy-to-use interface.

View metadata & other 'hidden' information

Quick View Plus Professional Edition makes it easy to see important information associated with a document that may not be visible in the document itself, such as metadata, hidden cells in spreadsheets, track changes in Microsoft Word, and speaker notes in Microsoft PowerPoint. This makes Quick View Plus Professional Edition indispensible in eDiscovery and computer forensics.

Avantstar

The best choice for native file review

The way in which content was originally presented can sometimes be nearly as important as the content itself, especially in areas such as litigation case management, litigation support and eDiscovery. That's why QuickView Plus Professional Edition retains the formatting of original documents with near perfect fidelity, including fonts, text formatting and graphics. QuickView Plus Professional Edition also maintains links within documents and email messages, making it easy to follow links to sites or other content referenced. And with numerous other advanced native file review features, it's no wonder QuickView Plus Professional Edition is recommended by leading legal software and service providers.

View Microsoft Project files without expensive licenses

Do you need to share up-to-date Microsoft Project files with a large number of users who only need access to view project information? QuickView Plus Professional Edition enables users to view Microsoft Project files without the need to purchase Microsoft Project licenses to view and share Project files. Now, any number of employees can view Microsoft Project files, including Gantt charts.

Search and highlight collections of documents easily and automatically

QuickView Plus Professional Edition makes it easy to search large and diverse collections of documents without having to enter search terms for individual documents. With 'Auto Search' just enter a search term and navigate to different documents. QuickView Plus Professional Edition will automatically highlight any search hits in both the content and metadata. Few programs save reviewers this much time and effort while dramatically improving their accuracy.

Easy to integrate with 3rd party programs

QuickView Plus Professional Edition's out-of-the-box integration options allow for easy integration with document management, litigation case management, eDiscovery and other third-party applications. In fact, many leading legal organizations utilize it as the essential native file viewing component of their applications. QuickView Plus Professional Edition also integrates seamlessly with various information access points, including Windows Explorer, major e-mail programs and leading Web browsers.
